

## **AutoPower “Star Ship” Package Shipping System**

**StarShip** provides warehouse shipping personnel with instant access to shipping services, package weight, accurate rates, package labels and shipping reports.

No more wasted time re-entering data and risking costly shipping errors at the Shipping desk with instant access to carrier choices and shipping rates. Simply scan the document number from your pick sheet to auto-populate the package shipping screen.

Accessed from Order Entry, StarShip supports the national parcel carriers (UPS, FedEx, DHL and USPS), regional carriers (OnTrac and Spee-Dee) and LTL options such as UPS Freight, FedEx Freight, Conway, and YRC. Product package and pallet labels, packing lists and a Bill of Lading (BOL) can be provided for each shipment.

While your packages are being processed, freight costs and tracking information are automatically updated to the sales order leading to faster, more accurate billing. Using the customer’s email address, order shipment details and carrier package tracking ID numbers are automatically sent resulting in a higher degree of customer service.

### **Profit by Intention**

**Better Margins**

**Better Cost Control**
